WELCOME TO ROME

Alessandro Vanzetti

The Rome Scientific and Organising Committees and all the Institutions responsible for archaeology in the city of Rome and the region of Latium warmly welcome the members of the EAA.

The 30th Annual Meeting of our prestigious European Association of Archaeologists at last takes place in Rome, one of the most significant sites for world archaeology and history, from the 28th to the 31st of August 2024, Wednesday to Saturday, as usual.

The event is organised by the Department of Ancient World Studies of Sapienza University of Rome, in partnership with the Italian Ministry of Culture, the Municipality of Rome, and the Lazio Region, with support from the public Universities of Rome and Latium, the National Research Council, Foreign Academies, and Professional Organisations. The practical organising tasks are managed by Symposia srl, our PCO.

Rome, often called the Eternal City, has long been considered the capital of the world -caput mundi- and is renowned for its immense beauty. Known as the „open city“ during World War II, it ideally embraces the world and its inhabitants. Its history spans from the vibrant prehistory of villages around the „blonde“ Tiber River to the founding of the city on the hills close to a natural river’s crossing, ultimately leading to the establishment of the Republic and Empire, built on law and rights, not just on military power. The significant transformation in late antiquity, becoming the seat of the Catholic Church, with a global vision, marks a major continuity through change. After the disasters of Fascism and World War II, it hosted the signing of the treaty that led to the foundation of the European Union. Rome is presently also home to the FAO (Food and Agriculture Organization) and ICCROM (International Centre for the Study of the Preservation and Restoration of Cultural Property, and its Police for the recovery of looted and illicitly trafficked archaeological materials is an outstanding model (Carabinieri for the Protection of Cultural Heritage). The commitment to lawfulness and international cooperation persists, despite the dark periods of its past.

Rome is also a populous city of modern life, where innovation must be reconciled with the ubiquitous remains of the past: a difficult task, where archaeologists act not only as servants of the public institutions and of the communities, but they promote

the relevance of the past as informed stakeholders.

And Rome and its past inspire authors, also as a source of metaphors, such as in literature, theatre, and cinema. Shakespeare spoke of Rome, in his “Julius Caesar”, a tragedy touching human responsibility toward citizens, the State, and friendship. Peplum-style movies like Wyler’s „Ben Hur“ and Scott’s modern peplum „Gladiator“ keep high the memory of the city in a wide public. But Roma finds its best images in visionary looks, like those by Federico Fellini, who gave us a poetic rendering of the conflict between past and modernity, in the movie „Roma“, when the digging of the Metro line comes through ancient Roman buildings, and wall paintings that start fading away. This scene remains particularly impressive to us archaeologists. In other visionary movies, like Greenaway’s „Belly of an Architect“, or Sorrentino’s „Great Beauty“ images of Roman monuments and ruins are part of stories resounding with Rome’s grandeur and fall: the persistent, dwindling equilibrium of being human.

Indeed, Rome is an excellent place to study the human ability to persist through change, as our motto suggests.

Rome is, in fact, the seat of three public universities, many national and international Academies working on archaeology, and of a concentration of archaeologists in many different positions, as well as with independent scholars and workers. The quantity and quality of archaeological remains and this density of professionals are an incredible source of archaeological brainstorming, which we hope our delegates will fully appreciate.

In all disciplines, and also in archaeology, Italy is one of the European countries producing the highest number of expat scholars, of high quality, and I am certain many of them will be present at our Meeting. Moving people around, creating connections, generating debate is one crucial element of the EAA Meetings, perhaps even more important now, in a world that sees a worrying increase of lack of reciprocal comprehension, and of conflicts and wars. In a time of dangerous weakening of international Institutions where contrasts could be faced, and solved peacefully, we are here to affirm again our will of sharing research and results.

This upholds the spirit of the EAA founders, who wished to join together international archaeologists in a friendly environment for the creation of shared spaces. Let me remember here one of them in particular, Anna Maria Bietti Sestieri, who is one of the persons who most inspired our candidacy of Rome as the host city, and passed away last year.

We hope our efforts to create an inspiring programme, filled with stimulating themes for successful sessions and presentations, will meet your expectations. The keynote lectures and remarkable venues are designed to provide ample food for thought. The vibrant social events, which are a hallmark of all EAA Meetings, will foster new connections and collaborations.

We have carefully planned excursions to immerse you in archaeology and beauty, and we are confident that the city’s lively spirit will create an unforgettable experience. As you explore Rome, you will continually encounter pieces of archaeology and history, both in the urban landscape and the surrounding countryside.

We look forward to welcoming you in person and virtually, in physical or digital Rome. Rome is forever and for everyone!

Ciao (as Italians say)!

THEMES

1. The Material Record: Current Trends and Future Directions

The material record represents the basis itself of archaeology, even if relations, analyses and digital transformations are now responsible for much of the records we use for interpretation. Therefore, we have to continuously redefine the role of the material record, and to develop methods appropriate for its thorough integration in future developments of the discipline.

- Objects, collections, exhibitions
- Chaîne opératoire and technical variability
- Life products, trade items, artworks: multiple scales of the material record
- Concrete and immaterial: the archaeology of art
- Sampling strategies, up-to-date and future analytical capacities
- Material culture analyses
- Buildings and monuments from the past to the future
- Roads, fortifications, aqueducts: major infrastructures
- Henges, temples, churches, basilicas, fora: the public and sacred materiality
- Materiality of beliefs, legal acts, statements of power
- Cultures or Societies through artefacts
- Gendered materiality
- Interconnections between artefacts and ecofacts
- Looting, illicit trade, improper appropriation: the place and meaning of the material record

2. Archaeological Sciences, Humanities and the Digital Era: Bridging the Gaps

The tumultuous growth of the role of sciences in archaeology may create a gap with humanistic and historical approaches. Moreover, the digital age creates parallel worlds and the size of data increasingly require synthetical and all-encompassing tools, that call for rigorous checks to avoid circular arguments. As such, the hybrid nature of archaeology itself requires the gaps to be bridged, to enable the creation of robust and satisfactory results, visions, meanings and enjoyment.

- (Inter-)disciplinary trajectories

- Hyperspecialisation or global thinking
- High-tech and/or low-cost scientific and digital archaeology
- Science theory and ethics in the study of BioArChaeological and human remains
- Archaeometry and social science
- Geoarchaeology and the Anthropocene
- BioArChaeology in perspective
- From remote sensing to digital detection of the subterranean heritage
- Data modelling in archaeology
- Artificial Intelligence (AI) and archaeology: opportunities and ethical issues
- The role of archaeology in digital story mapping and story telling
- Assessing the humanitas of archaeological readings
- The archaeology of big data
- Data science, data sharing and open data: towards a collaborative framework
- The technical challenges of professional archaeology
- Applied archaeology

3. The Life of Archaeological Heritage in Society

Archaeological Heritage constitutes the basic record of past human activities. The theme focuses on the relationships between past and present, the role of Heritage in society, and how Heritage can contribute to improving the quality of life and our environment. The richness of the Archaeological Heritage in Rome is a striking example of both a problem and an opportunity for society.

- Archaeological Heritage as a burden or a resource for society?
- Archaeological Heritage (and) education
- Archaeological Heritage and museums
- Archaeological Heritage, conservation and management
- Cultural Heritage and cultural relationships
- Professional archaeology and Heritage: actors and matter
- Discourses of Archaeological Heritage
- Archaeology-Heritage-art networks

- Heritage, health and wellbeing: new and emerging challenges
- Scientific dissemination, press, social media, sensationalism and archaeology
- Experimental archaeology: making, understanding, storytelling
- Role of public archaeology in Heritage management
- Excavation, study, enhancement, maintenance: how to make it sustainable

4. Persisting with Change: Theory and Archaeological Scrutiny

The motto of the Annual Meeting ‘Persisting with Change’ is a statement about the links between past and present: the remains of past days can be imposing, or almost negligible, but their persistence in the present is a point for reflection. Change is another inherent characteristic of the passage of time: „you’ll never step in the same river“ (Heraclitus). How do archaeologists deal with the dilemma, of continuity/endurance/persistence while also playing a part in this process of transformation? Rome, with its material and immaterial memories of transformation is the ideal location for reflecting on these issues.

- Landscape archaeology and change
- Hominins, humans, transitions and persistence
- Contacts, movements, migrations
- Genders and transforms
- Human groups, cultural bonds, societies and economy in motion
- Settlement transformations, from mobile to sedentary, from village to urban, and more
- Collapse and resurgence
- Resilience and/or persistence in societies
- Behavioural change
- States, superstates and empires
- Sacred acts, cult and religion: ‘times they were a-changing’?
- Recording and writing

5. All Roads Lead to Rome: Multiscalar Interactions

The saying „all roads lead to Rome“ reflects the prominence of the City and the close connections between the centre and the periphery in the ancient Classical World. In a broader sense today, it means that archaeology can search for multiscalar interactions among regions, features, people, and material culture. By changing the

scale of our studies, both in time and space, we can bring Europe to the world and the world into Europe.

- Multiscalar archaeologies
- Townscapes, landscapes, skylines and seascapes
- Archaeology of diverse environments, societies and cultures
- Different demographics
- Connectivity and mobility through land, sea, sky
- Connectivity and networks
- Trade, exchange and consumption
- Pandemics and global impacts
- Integration and separation, links and borders
- Mobility, forced migration and diaspora
- Empires, powers, colonisers and the colonised
- Inequalities and dominant cultures
- Intersectionality

6. The Mediterranean from Within

The Mediterranean Sea has been recognised as an arena of population movement and intense cultural and trade interactions, from its deep history to the context of imperial systems. Its potential for insular, coastal and peninsular systems, including 'continental islands', is a notable example of persistence and transformation. The diachronic growth of networks, their interactions, and external influences shape a part of the past world that is replete with different meanings for both scholars and the public.

- Coastal archaeology
- Shipwreck archaeology
- Islands and terrestrial fragments
- Mobility and networks of connectivity
- Ships and coastal/maritime industries
- Contacts, ports of trade, colonisation processes
- Maritime cultural landscapes
- Watery boundaries

- Localism and Mediterraneo-centricism: isolation and diversity
- Insularity and identities
- Roman Mediterranean life
- Mediterranean Empires
- Conflict, resilience and adaptation
- Orient and Occident
- Medieval superpowers in the 'Middle Sea' and beyond

7. Archaeology of Sustainability through World Crises, Climate Change, Conflicts and War

The study of the past plays a key role in addressing sustainability, shaping our perception of the present, and our views of the future: 'Historia magistra vitae', wrote Cicero. Indeed, the past has shaped the space in which we live, both positively and negatively: we are all obliged to reflect on the sustainability of the past and, above all, of its representation. The city of Rome is a paradigmatic case, with its long history layered in a complex palimpsest in which citizens and tourists merge, live and transform.

- Scales of sustainability: the many starts of the Anthropocene
- Environmental archaeology
- Archaeology of resource exploitation
- Responsible archaeology
- Human impact and animal and plant species
- Resilience and path dependence: reactions to crises
- Sustainability of GDP, wealth, inequality of growth
- Global, local and marginal
- Whose archaeologies?
- Sustainability of field archaeology and finite archaeological deposits
- 'New' archaeologies, tools, paradigms, revolutions: are they robust or sustainable?
- Sustainability of open access policies and academic careers
- Museums and the general public: sustainability in storytelling or in telling history?
- Archaeological heritage and tourism: poor and best practices
- Narrative of conflict and war
- Impact of vandalism and war

ROME

About the City

Rome, the capital of Italy, is renowned for its vast size and population, placing it among Europe's largest cities. Located on the Tiber River in the Lazio region of central-western Italy, Rome boasts a history spanning 28 centuries. Ancient Rome's contributions to law, warfare, art, literature, architecture, technology, and language have profoundly shaped Western civilization and continue to influence global culture today.

The city harbours possibly the world's highest concentration of historical and architectural treasures, with its centre designated as a UNESCO World Heritage Site, representing Western Europe's rich cultural heritage. Founded in 753 BCE, but settled since at least 1,500 BCE, Rome served as the capital of the Roman Kingdom, Republic, and Empire, dominating Western Europe and the Mediterranean region for 6 centuries, from the 1st century BCE to the 5th century CE.

Since the 1st century AD, Rome has been the seat of the Papacy and, following the decline of Byzantine rule in the 8th century, became the capital of the Papal States until 1870. It then became the capital of the Kingdom of Italy in 1871 and, subsequently, the Italian Republic in 1946. Since 1929, Rome has also hosted Vatican City, an independent city-state governed by the Pope.

During the Renaissance and Baroque periods, Rome flourished economically and culturally, becoming a prominent centre of architecture and art, fueled by its ties with influential patrons from Florence and the wealth of the papal court.

Traveling to and from Airports

Rome has two airports: Fiumicino (FCO), the largest in Italy, located 34 km southwest of the city centre, and Ciampino (CIA), 16 km southeast, near Appia Road.

From FCO, the Leonardo Express train departs every 15/30 minutes to Termini Station (€14; 30-minute travel time; service time: 4:50 AM-11:05 PM from Termini; 5:38 AM-11:53 PM from FCO). The standard train connection with Rome (Train FL1, including Trastevere, Ostiense and Tiburtina Station (close to Sapienza) departs every 15/30 minutes (€8). Tickets must be validated before use.

Taxis to and from FCO have fixed fares for city centre trips (€ 50 per ca. 45 min. trip connecting any place inside the Roman walls (other prices for different destinations). Buses also connect FCO to Termini, like the Terravision Shuttle Bus (€6 one way or €11 return; 45-60 minutes).

From CIA, a shuttle bus to Termini costs from €6 and takes 40-50 minutes, oper-

ated by different companies. Booking in advance is recommended. Taxis from CIA to central Rome take about 30 minutes with a fixed fare (€ 31 per trip connecting any place inside the Roman walls; other prices for different destinations).

Public Transport

Metro

Rome's metro system comprises three lines (A, B, and C, still under construction). For most city explorations, you'll use lines A and B. Tickets are valid for all [ATAC Roma](https://www.atac.roma.it/) (<https://www.atac.roma.it/>) public transport, including metro, trams, buses (except tourist buses, and some regional trains (2nd class, Roma-Lido, Rome-Viterbo, and Rome-Giardinetti, but not to the airport. The metro operates daily from 5:30 am to 11:30 pm (until 1:30 am on Fridays and Saturdays).

Public Buses

In areas like Trastevere, away from metro stops, buses provide extensive coverage using the same tickets. Tickets are available at metro and bus stations, tobacco shops, and newsstands. Validate your ticket before boarding; it's valid for 100 minutes, allowing transfers. Detailed routes are available at ATAC Roma website.

Tickets

Tickets are sold at tobacconists, bars, some ATAC shops (e.g. Termini Station, and vending machines (e.g. metro stations) as soft rechargeable cards (Multi-BIT, which may cost €0.50. You can also use 'Tap & Go' with credit and some debit cards (<https://www.atac.roma.it/en/tickets-and-passes>). Children under 10 travel free with a paying adult. Remember to validate your ticket on buses and trams to avoid fines. Ticket types:

- BIT Metro Ticket: €1.50 for 100 minutes of travel, valid for one metro or train trip.
- Roma 24H Ticket: €7 for 24 hours of unlimited travel.

EXHIBITORS

1. Material Minds: Exploring the Interactions between Predictive Brains, Cultural Artefacts, and Embodied Visual Search - XSCAPE (ERC-2020-SyG 951631)

How do the worlds we build alter our own minds and the ways we process information? How do the material structures that humans build (settlements, buildings, and artefacts) actively change patterns of thought and attention? How do understanding change in these 'material codes' become part and parcel of understanding the emergence of the modern mind? To answer these questions, the "Material Minds" Project brings together a team from archaeology, vision science, and cognitive philosophy. Using a carefully curated set of materials, spanning a range of cultures and a wide sweep of archaeological, historic, ethnoarchaeological and contemporary settings, we aim to test the hypothesis of materiality-driven cognitive change. XSCAPE project aims to deliver the first fully-integrated framework for understanding the potent yet ill-understood cycles by which we humans make and transform the landscapes, practices, and artefacts that make and transform our minds.

The Principal Investigators of XSCAPE are Felipe Criado-Boado, (corresponding PI) of the INCIPIT-CSIC in Santiago de Compostela, Luis M. Martínez, of the Institute of Neurosciences (joint centre of CSIC and UMH, in Alicante), Andy Clark, of the University of Sussex, and Johannes Müller, of the Institute of Prehistoric and Protohistoric Archaeology of Kiel University.

More information on the project can be found at: <https://xscape-project.eu/>

OPENING CEREMONY

Where: Sapienza Campus, building CU001, Aula Magna

When: Wednesday 28 August, 15:00-18:00

How to get there: Building CU001 is located close to the registration desk at the Faculty of Letters e Filosofia (CU003). The Campus can be reached through underground (metro), stopping at Castro Pretorio or Policlinico, followed by a short walk. Sapienza is also only a 20-minute walk from Termini Station and 30-minute walk from Tiburtina Station. Buses and trams link the adjacent Piazzale del Verano to the centre of Rome and various urban locations.

1 - This shared space may be used by individuals experiencing homelessness. Please be considerate and exercise caution.

Description: The Opening Ceremony will take place in the major hall of Sapienza University, with a capacity of 850 seats; the ceremony will be further streamed in 4 lecture rooms in CU028 (Blue Building, totalling 485 seats. Aula Magna is unfortunately not accessible from the monumental front staircase, which is undergoing restoration works, but from the back side porch. The palace of the Rectorate, finished in 1935, is the core of the Campus, and a characteristic mix of architectural Rationalism and magniloquence of the most powerful and rhetorical season of Italian architecture of the Fascist period. The wide use of travertine, with inserts of precious marble, is also typical of Sapienza buildings. Inside the hall, the fresco by the renowned painter Mario Sironi has been recently restored, and although it was originally strongly connected to the celebration of the regime, its classicist representation of scientific disciplines and Italy can be seen also as a message for the fight of knowledge against obscurity, paradoxically also of the Fascist dictatorship. The tones of Sironi are typically showing a vein of melancholy. A complex monument, reflecting the complexities of Italian history and perhaps the human journey. Now it is a well-suited meeting hall.

WELCOME RECEPTION

Where: Vigna Barberini, Palatine hill - Park of the Colosseum, Via Sacra (Titus' Arch entrance, 00186 Roma)

When: Wednesday, 28 August, 19:30-22:00

How to get there: From Sapienza University, the easiest way to reach the Colosseum Park is through Underground Metro line B (blue line): 4 stops from Policlinico (direction Laurentina, followed by a short walk (50 minutes in total). Many buses reach the central archaeological area.

Tourists will leave the Roman Fora at 19:15. The entrance for EAA delegates is scheduled between 19:30 and 20:30, only from the Via Sacra/Titus' Arch entrance. Sunset is expected at 19:50. Access for disabled persons is from Via di San Gregorio, 30 (Vignola's Portal). The estimated capacity is approx. 2,500 people.

Description: Vigna Barberini, a former vineyard of the Roman noble family, is an intermediate area between the Fora and Via Sacra area and the Palatine hill. It was occupied by aristocratic houses and different facilities in the Roman Republic and early Imperial ages, and remained at the fringe of the Imperial Palace over the Palatine. Eventually, the construction of the temple of Deus Sol Invictus (a solar god of Eastern Mediterranean origin) by emperor Elagabalus (218-222) fenced it away inside a high square wall, still standing. Churches and Monasteries occupied the adjacent areas, and are still in use, today. This created a suspended, isolated space that maintains a magical atmosphere within the busy central archaeological area.

Programme:

- Welcome by Alfonsina Russo (Director, Parco del Colosseo) and Eszter Bánffy (EAA President)
- Refreshments and finger food

The food options range from affordable pasta and pizza to international cuisine, with a nearby restaurant for special dishes.

History and character of the area: Testaccio is named after the pots (testae) accumulated in the area, once Rome's fluvial harbour. The garbage dump of Mount Testaccio, made of oil amphoras, provides insights into ancient Roman economy. Testaccio Estate is at the hill's base, surrounded by bars and restaurants. The district, built in the late 19th century, was once an industrial hub with facilities now being converted into universities, art academies, museums, and housing. Testaccio is known for its traditional Roman restaurants, especially for meat dishes and Roman pizza. Porto Fluviale and Via Ostiense are popular nightlife areas with diverse cuisines. In 1929, Testaccio hosted the first official stadium of AS Roma.

Special place: the Non-Catholic Cemetery: Located between the Caius Cestius Pyramid

and Mount Testaccio, this cemetery has been in use since 1716 for non-Catholic communities. It hosts the graves of poets like John Keats and Percy Bysshe Shelley, artists, philosophers like Antonio Gramsci, and numerous archaeologists. The cemetery is open during the Annual Meeting (entrance with donation, 9:00-16:30).

MERC PARTY

Where: Giardino Verano, Piazzale del Verano, 00185 Roma

When: Friday 30 August, 20:00-24:00

How to get there: Giardino Verano is a 10-minute walk from Sapienza, located in the San Lorenzo neighborhood.

Night buses (23:30 - 5:30) serve Rome every 30 minutes. Verano is served by one night bus, with another one nearby:

- n3d (clockwise) and n3s (counter-clockwise) circular lines: Piazzale Ostiense - Trastevere - Vatican - Auditorium - Sapienza - Verano - Porta Maggiore - Colosseo - Piazzale Ostiense
- nearby night bus: nMB: Laurentina/EUR (South) - Ostiense - Rebibbia (North) following Metro Line B

Description of the location: Giardino Verano is a public space for cultural and social events in front of the Early Christian Basilica of San Lorenzo. While many bars and restaurants may be closed in late August, Giardino Verano operates all summer. Visitors can relax, listen to music, meet friends, study, play, eat, and drink in a cozy, tree-filled atmosphere.

History and character of the area: The San Lorenzo area, once marginal and outside the Roman walls along Via Tiburtina, contains Roman and Medieval remains and the San Lorenzo catacombs. The catacombs are the predecessors of Rome's traditional Monumental Cemetery of Verano, now limited in use for new burials. The San Lorenzo Basilica, built on the site of Christian martyr Lorenzo's burial, features reused Roman architectural elements and lavish decoration. The modern district was originally working-class and suffered the most bombing damage in Rome during World War II on July 19, 1943, due to its proximity to the railways, heavily impacting the Basilica. Today, the district hosts a university student community, with traditional artisans, particularly marble workers, alongside pubs, pizza houses, art studios, and social activist collectives.

KEYNOTE LECTURES

A contemporary view of hunters and gatherers adaptations, through an under-researched African region

Makarius Itambu

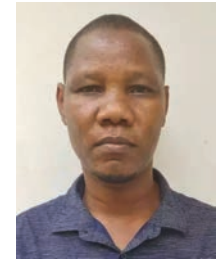

When: Thursday 18.45-19.45

Where: Room 6, CU003, FL1, Aula I

New field research in the Singida region, in Tanzania's central plateaus, represents an emblematic case to study early human biocultural evolution and raises issues relevant for reflections on archaeological theory. Its emerging significant heritage, with contexts ranging from the Early-Middle Stone Age (ESA-MSA) period to the present time, including more than 50 stratified open-air sites, rock shelters and rock art sites, shows how much modern archaeological research can acquire from an area so far under-researched. It is still possible, in 21st century CE, to change the geographic narrative of archaeology by expanding research horizons and by designing and devising grassroots projects with the local community.

Furthermore, the recent transition of hunting-gathering communities to agropastoral economic strategies, has condensed in the last 50 years a major transformation of human socio-economic, and cultural adaptive behaviors to varied ecological niches. For our study, we adopt multiple cutting-edge palaeoecological proxies such as phytoliths, stable isotopes, and plant wax biomarkers to complement site and stone tool studies. Our goal is to better understand the historical trends related to ancient mosaic habitats, and the role that climatic and environmental drivers had on shaping human cultural and technological adaptations to the arid environments of Singida during the Pleistocene-Holocene.

The project is framed inside a community-oriented research project, namely the 'Singida Heritage & Archaeological Research Project' (SHARP, recognizing archaeology as a practice intertwined with a fabric of social and cultural relations. African scholars generally lack direct funding, and are still unlikely to obtain grants from external funders, therefore we still work with little support or resources. We're here to demonstrate that we can change not only where archaeology is done in Africa, but also how we're changing project design, stakeholder engagement, and knowledge mobilization.

Biography

Makarius Itambu earned his PhD degree in Archaeology in 2020 with a specialization in Biological Anthropology. Immediately after his graduation, he returned to teach at the University of Dar Es Salaam (UDSM) in Tanzania. He teaches Palaeolithic Archaeology, Human Evolution and Stone Age Archaeology, as well as Research Methods courses at the UDSM. Mak Itambu is interested in exploring and underscoring hominin behaviours in relation to food procurement strategies in the past, stone tools manufacture and the synergetic links between hominin-environmental interactions, cognition abilities and subsistence systems. Specifically, he uses phytolith analysis in combination with archaeological and plant micro-remains data to reflect the nature and type of environments that were occupied by early humans and the plant environments surrounding their habitats during the Pleistocene-Holocene epochs. Also, he performs microscopic analysis of the soil and sediment for phytoliths, and the laboratory treatment for stable isotopes and granulometric analyses.

Mak is a research affiliate at the Max Planck Institute of Geoanthropology MPG-Jena, Germany. Similarly, he received a Mobility Grant from MPG to be able to routinely travel to Germany to undertake radiocarbon dating (^{14}C) and Stable Isotopes analysis. In 2024, he obtained a MOPGA grant from the French Ministry of Europe and Foreign Affairs-hosted by the CEREGE & CNRS-France (Research stay in France for 12 months). He is currently, relocated to France to learn and practice the newly emerging lab analytics and equipment for archaeomagnetism, (triple oxygen isotope composition of phytoliths ^{17}O , XRD & laser granulometry at the Européen de Recherche et d'Enseignement des Géosciences de L'environnement, Aix-en-Provence et Aix Marseille Université, France. Additionally, he recently received a 1-year research grant from the Gerda Henkel Foundation for his research project entitled: 'Community Engagement in Safeguarding the Rock Arts of Singida Region, Tanzania' in order to undertake a community engagement-oriented project to salvage the endangered rock art sites of the Singida region.

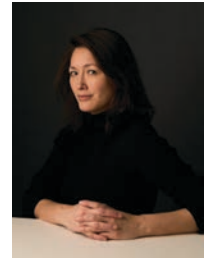

The Making of a Mediterranean Network: The Retrospective Ethnogenesis of the Greeks

Naoíse Mac Sweeney

When: Thursday 18.45-19.45

Where: Room 23, CU002, FL1, Calasso

The ancient Greek world can be conceptualised as a network, stretching across the Mediterranean and beyond into the Black Sea. Over the last fifty years, scholars have debated how this network came into being, arguing for different models based on centrally-organised colonisation, mass migration, entrepreneurial movements, and the haphazard mobility of individuals. In all models however, the directionality of human travel is the same – it is assumed that Greek people travelled outwards from their original homeland in the Aegean, and created the network by settling in new and far-flung locations. In this paper, I will argue the opposite. Based on the work of the ERC project, *Migration and the Making of the Ancient Greek World (MIGMAG)*, I will propose that the ancient Greek world was created, not by the outwards emigration of people with a pre-existing Greek identity, but rather by complex multidirectional and multiscale movements leading to a gradual cultural convergence, culminating in the retrospective ethnogenesis of the Greeks.

Biography

Naoíse Mac Sweeney is Professor of Classical Archaeology at the University of Vienna. She is an Academic Editor of the journal *Anatolian Studies*, a Fellow of the Royal Society of Antiquaries (UK), a Corresponding Member of the Archaeological Institute of America (USA), and currently leading the ERC project, *Migration and the Making of the Ancient Greek World (MIGMAG)*. The main focus of her research is migration, cultural interactions, and identities in the first millennium BCE, particularly in Anatolia and the Greek world. An important second strand of her work considers the uses of antiquity in modern political discourse.

Material Culture Acting from Beyond Time: “Antique” Artifacts in Early Medieval Mortuary Practices within the Central Balkans

Monika Milosavljević

When: Saturday 18:45-19.45

Where: Room 23, CU002, FL1, Calasso

As the remnants of the post-Roman world transformed into the early Medieval period, there is observable significant and evident reuse of acontemporaneous, “antique” material culture together with the adoption of “anachronistic” mortuary practices. Roman culture lingered, continuing to reverberate into the future in medieval communities that had not been part of the original multi-scalar empire, nor had maintained a direct connection to the land throughout the previous empire. Early medieval mortuary practices of the central Balkans clearly demonstrate interconnections in social and cultural construction in a time of crisis, building upon the remains of „the shoulders of giants”. Cemeteries and individual graves from the 9th to 11th century around the Danubian limes (located in modern-day Serbia) are most recognizable. The phenomenon of reuse may be more concretely labelled the “percolation of time” i.e., how the link to the past could be used to justify the present by newly-settled small communities of Slavs and Avars in the Early Middle Ages. The key takeaway is that the dissemination of material culture and ideas need not merely be derived directly from the centre to the periphery and in reverse, but may trickle out locally beyond assumed boundaries of time. New communities continue to be shaped from the past, selecting and augmenting to the original meanings of the material culture of the past while assigning ones of their own.

Biography

Monika Milosavljević is an associate professor at the Department of Archaeology, Faculty of Philosophy at the University of Belgrade, as well as a co-head of the Centre for Theoretical Archaeology at the same department. She has been a Medieval European Research Community (MERC) committee member since 2019. Her research interests lie in the political usage of archaeology, the history of archaeology, the archaeology of identity and archaeological theory in general. In recent years, Monika has focused on medieval mortuary archaeology and the stećci phenomenon - medieval monumental grave markers of unknown origin dating from the 12th to 16th century. Moreover, she is interested in the history and philosophy of science, particularly the philosophy of archaeology and evidential reasoning. Believing that archaeology as a prominent field has its place in the everyday world around us, she is passionate about the benefits of plurality in archaeology, from epistemological positions to everyday teaching practice.

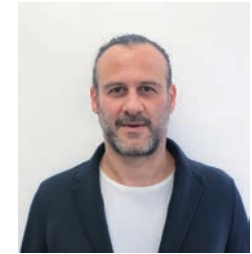

Materialising Sacred Landscapes: An Investigative Tool for Understanding Social Transformation

Giorgos Papantoniou

When: Saturday 18:45-19.45

Where: Room 67, CU028, FLG, Aula 1

A holistic approach to landscape archaeology considers 'landscape' as an expression of society within a system of cultural meaning; it gives equal consideration to built and natural environments, as well as humans and movable objects, seeking to 'read' place-making and materialisation of ideologies. This paper, using Cyprus as a case-study, aims to raise issues for discussion about the changes in the use and concept of sacred landscapes as developed in the Archaic and Classical periods under the Cypriot kings (the basileis, but then continued to function in a new imperial environment, that of the rule of the Ptolemaic strategos and later of the Roman proconsul. This diachronic, inter-disciplinary and Cypro-centric approach reveals that the new politico-economic Hellenistic and Roman structures were, as in the preceding periods, supported by the construction of symbolically charged sacred landscapes. Thus, during the long history of the island, we may identify three pivotal phases: first the consolidation of the Cypriot polities and the establishment of a 'full' sacred landscape as shown by the rise of the number of urban and extra-urban sanctuaries; then the transition from segmented to unitary administration under Ptolemaic and Roman imperial rule and the consolidation of a more 'unified sacred landscape'; finally, as a conclusion, the establishment of a number of Christian bishoprics on the island and the movement back to a 'full' sacred landscape as shown by the establishment of a great number of urban and extra-urban basilicas. Case-studies will also be drawn from the archaeological surface survey project in the Xeros River Valley in Larnaka, where we have recently combined landscape, historical and community archaeology to address issues related to contemporary cultural heritage and societal transformations, such as healing of negative memories and contribute to various communities' wellbeing. Moving beyond the particular example of Cyprus, this contribution offers a paradigm for the implications that the employment of the 'sacred landscapes' concept may have when addressing issues of socio-political and socio-economic transformations.

Biography

Giorgos Papantoniou (BA University of Cyprus, PhD Trinity College Dublin) is Assistant Professor in Ancient Visual and Material Culture in the Department of Classics, Trinity College Dublin. He has also previously held research and teaching positions at the University of Cyprus, the Open University of Cyprus, the Institute for Mediterranean Studies in Crete, and the University of Bonn in Germany. He currently coordinates the international scientific network 'Unlocking Sacred Landscapes' (UnSaLa). Focusing on Mediterranean archaeology with Cyprus as a case-study, his agenda is based on interdisciplinary and diachronic approaches bridging the Greek and the Roman worlds: bringing together landscape, archaeological, textual, iconographic evidence and deploying anthropological models, he works on the visual and material culture of the island from the Bronze Age to Late Antiquity. He is currently developing new interests in cultural heritage and historical archaeology, especially archaeology and wellbeing, reception studies and use of ethnography. More specifically, he focuses and publishes consistently on four diverse yet interconnected themes: landscape archaeology; Hellenistic society and image making; material culture and the archaeology of ritual and religion; and cultural heritage studies.

Another radiocarbon revolution? Uses of single tree-ring ^{14}C in improving radiocarbon calibration and anchoring chronological frameworks

Charlotte Pearson

When: Thursday 18.45-19.45

Where: Room 67, CU028, FLG, Aula 11

There is no doubt that radiocarbon dating has been revolutionary for the archaeological discipline, but situations still persist where it does not agree with archaeological expectations. Where such issues cannot be resolved, attempts to synchronize multi-region chronologies can be held up for decades. Recent advances in radiocarbon instrumentation mean that it is now possible to upgrade data sets underpinning the international radiocarbon calibration curve (IntCal) with a far greater sample depth and precision than was previously practical. The result is a more accurate representation of past ^{14}C against which to calibrate radiocarbon samples. For some time periods this will likely make little difference to calibrated dates, but in others we now know it could impact dating results by 70 or more years. The calibration data also reveal globally reproducible patterns or events in ^{14}C which can be used in new ways to anchor chronologies and complement improved calibration. This talk will preview some likely changes for calibrated radiocarbon dates between 2000 and 1400 BCE and provide examples of how single year ^{14}C can be used to anchor floating archaeological records.

Biography

Dr Charlotte Pearson is a ge archaeologist, radiocarbon and tree-ring scientist based at the Laboratory of Tree-Ring Research at the University of Arizona, Tucson, USA, where she is also affiliated faculty in the School of Anthropology and Geosciences. She gained her bachelor of science degree in environmental archaeology at the University of Wales, Trinity St David, her master's degree in ge archaeology and her PhD in archaeological science at the University of Reading, UK. Her research focuses on using tree-rings, radiocarbon and paleoenvironmental evidence to provide more accurate chronological frameworks for inter-regional archaeology and geological hazards. She serves as part of the International Radiocarbon Calibration Curve working group where she is part of a team generating and refining single year (tree-ring based) radiocarbon data to improve the accuracy of the radiocarbon calibration curve. She is currently developing the National Science Foundation funded 'TIME lab', at the University of Arizona, which will continue this work and innovate further high-precision dating solutions utilizing tree-rings, radiocarbon, stable isotope and chemical evidence.

Stratified lives around the sanctuary of San Casciano dei Bagni (Siena, Italy): archaeology, ancient bronzes, modern communities

Jacopo Tabolli

When: Saturday 18:45-19.45

Where: Room 6, CU003, FL1, Aula I

This lecture presents the new discoveries at the sanctuary of Bagno Grande, at San Casciano dei Bagni (Siena, Italy), a thermo-mineral spring still in use today. The Etruscan and Roman communities that structured and frequented the sanctuary between the 3rd century BCE and the 5th century CE left visible architectural, sculptural and textual evidence. Moving beyond the now famous votive offerings in bronze, we will investigate the complex multilingual and multicultural elements that are stratified in the shrine.

Multilingualism and Multiculturalism are also the two main components of the international research project around Bagno Grande. The role of the current local community is crucial within the research project and its interaction with universities and political institutions (such as Region Tuscany and the Italian Ministry of Culture) is a primer of the research. Decolonizing the assumption that links every archaeological research to the initiative of academics, we will explore how the community of San Casciano dei Bagni over the past thirty years has led the research and promoted the enhancement of cultural heritage: as a result, the impact assessment analyses of the ongoing project since its early phases keeps resulting into a constant renegotiation of the research objectives of the project.

Biography

Jacopo Tabolli is Assistant Professor of pre-Roman Archaeology and Etruscology (ARCH-01/C) at the Università per Stranieri di Siena and Director of the Centre for Archaeology of Diversity and Mobility in pre-Roman Italy. He received his BA in 2006, MA in 2008 and completed his PhD in 2012 at Sapienza University of Rome. Between 2015 and 2017 Jacopo has been a post-doctoral researcher at Trinity College Dublin, where he also taught for two years and a Research Associate at the University of Cyprus. Between 2017 and 2021 he was an Archaeological Officer at the Soprintendenza Archeologia, belle arti e paesaggio per le province di Siena, Grosseto e Arezzo. He published two books, edited twelve volumes and wrote more than 120 papers on peer-reviewed journals and book chapters. Editor of *Officina Etruscologia* and founder of the Museo Archeologico Virtuale di Narce, his main research interests include also cultural heritage law and economy of culture.

His main research interests focus on Etruscan and pre-Roman material culture, funerary ideology, ancient political landscape and sanctuaries. Jacopo has been excavating in several necropoleis, sanctuaries and settlements. Jacopo has been working for many years on Etruscan Veii and the Ager Faliscus (especially on Narce, combining the study of material culture with archival research). He has been addressing in particular the role of legal and illegal excavators at the time of the Unification of Italy (Francesco Mancinelli Scotti for instance, published in 2021 with M. Cristina Biella). Jacopo is currently conducting multidisciplinary research on the archaeology of the territory of ancient Chiusi, with a focus on the protourban and urban development of the centre, and on the territory to the west of the Cetona Mountain, towards the Ombrone Valley and the area of Etruscan Saina/Siena. He is also interested in the role of the small islands of Tuscany between the Late Bronze Age and the Romanization.

Jacopo currently directs the archaeological excavations at San Casciano dei Bagni (Etruscan and Roman sanctuary at Bagno Grande) and at Isola del Giglio (Seascape project, receiving funding from different national and international institutions). He co-directs the excavation at the tumulus of Laona, in Palaepaphos (Cyprus, within the framework of the PULP project, directed by Maria Iacovou). Alongside the excavations, Jacopo is developing the display of the artifacts and contexts in local and national museums, integrating the results of field activities and surveys into broader projects of enhancing and communicating cultural heritage to local communities.
